$$

| Equation | Basis for the equation | Eq. \# |
| :---: | :---: | :---: |
| $\delta \mathrm{W}=-\mathrm{p}_{\text {op }} \mathrm{d} \mathrm{V}$ | General definition of work of compressionexpansion | 1 |
| $\mathrm{W}=-\mathrm{p}_{\mathrm{op}}\left[\mathrm{d} \mathrm{V}=-10.0 \mathrm{~atm} \bullet\left[\mathrm{~V}_{\mathrm{f}}-\mathrm{V}_{\mathrm{i}}\right]\right.$ | Given, $\mathrm{p}_{\mathrm{o}} \mathrm{p}=$ constant $=10.0 \mathrm{~atm}$ Integrating Eq 1 | 2 |
| $\mathrm{pV}=\mathrm{nRT}$ | Ideal gas equation of state | 3 |
| $\mathrm{V}_{\mathrm{f}}=\mathrm{R}_{\mathrm{f}} / 10.0 \quad \mathrm{~V}_{\mathrm{i}}=\mathrm{R} 300 / 1.0$ | Using given data and Eq 3 | 4 |
| $\mathrm{W}=-10.0 \mathrm{~atm} \bullet\left[\mathrm{R} \mathrm{T}_{\mathrm{f}} / 10.0-\mathrm{R} 300 / 1.0\right]$ | From Eq 2 and 4 | 5 |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{dV}$ | General, from $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ | 6 |
| $\mathrm{d} \mathbf{U}=\mathrm{C}_{V} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{T} \mathrm{dV}$ | General, using definition of $\mathrm{C}_{V}$ | 7 |
| $(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}}=0$ | Property of an ideal gas | 8 |
| $\mathrm{d} \mathbf{U}=\delta \mathrm{q}+\delta \mathrm{W}$ | First law of thermodynamics | 9 |
| ठq = 0, q = 0 Answer | For an adiabatic process, as in this problem | 10 |
| $\Delta \mathbf{U}=\mathrm{W}+0$ | From Eq 9 and 10 | 11 |
|  | Case I monatomic ideal gas, $\mathrm{C}_{V}=(3 / 2) R$ |  |
| $\Delta \mathbf{U}=\int \mathrm{C}_{V} d T=\mathrm{C}_{V}\left[\mathrm{~T}_{\mathrm{f}}-\mathrm{T}_{\mathrm{i}}\right]=(3 / 2) R\left[\mathrm{~T}_{\mathrm{f}}-300\right]$ | from Eq 7 and $C_{V}$ independent of temperature and $=3 / 2 \mathrm{R}$ for monatomic ideal gas, given $\mathrm{T}_{\mathrm{i}}=300$ | 12 |
| $\begin{aligned} (3 / 2) R\left[T_{f}-300\right]= & -10.0 \text { atm } \bullet \\ & {\left[R T_{f} / 10.0-R 300 / 1.0\right] } \end{aligned}$ | From Eq 12 and 11 and 5 | 13 |
| $\mathrm{T}_{\mathrm{f}}=1380 \mathrm{~K}$ Answer | Solving Eq 13 for $\mathrm{T}_{\mathrm{f}}$ | 14 |
| $\mathrm{W}=+13.469 \mathrm{~kJ}$ Answer | From substituting Eq 14 into Eq 5 | 15 |
| $\Delta \mathbf{U}=+13.469 \mathrm{~kJ} \quad$ Answer | From Eq 11 and Eq 15 | 16 |
| $\mathrm{dH}=(\partial \mathbf{H} / \partial \mathrm{T})_{\mathrm{p}} \mathbf{d T}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | . $\mathrm{H}=\mathrm{H}(\mathrm{T}, \mathrm{p}$ ) | 17 |

| $\mathrm{d} \mathbf{H}=\mathrm{C}_{\mathrm{p}} \mathrm{dT}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | . Using Eq 17 and definition of $\mathrm{C}_{\mathrm{p}}$ | 18 |
| :---: | :---: | :---: |
| $(\partial \mathbf{H} / \partial \mathrm{p})_{\mathrm{T}} \mathrm{dp}=0$ | Property of an ideal gas | 19 |
| $\mathrm{C}_{\mathrm{p}}=\mathrm{C}_{V}+\mathrm{R}=(5 / 2) \mathrm{R}$ | Property of an ideal gas which is monatomic | 20 |
| $\begin{aligned} & \Delta \mathbf{H}=\int \mathrm{C}_{\mathrm{p}} \mathrm{dT}=(5 / 2) \mathrm{R}\left[\mathrm{~T}_{\mathrm{f}}-\mathrm{T}_{\mathrm{i}}\right] \\ & =(5 / 2)\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right][1380-300] \\ & =+20.782 \mathrm{~kJ} \text { Answer } \\ & =+2 \end{aligned}$ | Using Eq 18, 19, 20 and integrating | 21 |
| Case II | diatomic ideal gas, $\mathrm{C}_{V}=(5 / 2) \mathrm{R}$ | 22 |
| $\begin{aligned} (5 / 2) R\left[T_{+}-300\right]= & -10.0 \mathrm{~atm} \bullet \\ & {\left[R T_{f} / 10.0-R 300 / 1.0\right] } \end{aligned}$ | Using Eq 13 and 22 for a diatomic ideal gas | 23 |
| $\mathrm{T}_{\mathrm{f}}=1071.4 \mathrm{~K}$ Answer | Solving for $\mathrm{T}_{\mathrm{f}}$ | 24 |
| $\mathrm{W}=+16.035 \mathrm{~kJ}$ Answer | Substituting $\mathrm{T}_{\mathrm{f}}$ into Eq 5 | 25 |
| $\Delta \mathbf{U}=+16.035 \mathrm{~kJ} \quad$ Answer | Replacing $\mathrm{C}_{\mathrm{V}}$ by (5/2)R and $\mathrm{T}_{\mathrm{f}}$ into Eq 13 | 26 |
| $\Delta \mathbf{H}=+22.448 \mathrm{~kJ}$ Answer | Replacing Cp by (7/2)R and $\mathrm{T}_{\mathrm{f}}$ into Eq 23 | 27 |
| IF n moles instead of $\mathrm{n}=1 \mathrm{~mole}$ |  |  |
| $\mathrm{T}_{\mathrm{f}}$ no change $\quad$ Answer | Multiply both sides of Eq 13 or 23 by n |  |
| $\mathrm{W}=$ multiply by n Answer | Extensive property |  |
| $\Delta \mathrm{U}=$ multiply by n Answer | Extensive property |  |
| $\Delta \mathrm{H}=$ multiply by n Answer | Extensive property |  |

4. For problems 4 and 6 which are for ideal gases undergoing a reversible adiabatic process, we will start from the general equations and apply these three very specific conditions (ideal gas, adiabatic process, reversible process) to it so that we may end up with equations that we can use for both Problem 4 and Problem 6.

| Equation | Basis for the equation | Eq. |
| :---: | :---: | :---: |
| $\mathrm{d} \mathbf{U}=\delta \mathrm{q}+\delta \mathrm{W}$ | First law of thermodynamics | 1 |
| $\delta \mathrm{W}=-\mathrm{p}_{\text {op }} \mathrm{dV}$ | Definition of compression-expansion work | 2 |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{dV}$ | General, from $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ | 3 |
| $\mathrm{d} \mathbf{U}=\mathrm{C}_{\mathrm{V}} \mathrm{dT}+(\partial \mathrm{U} / \partial \mathrm{V})_{T} \mathrm{dV}$ | Introduce definition of $\mathrm{C}_{\mathrm{v}}$ into Eq 3 | 4 |
| $\delta \mathrm{q}-\mathrm{p}_{\mathrm{op}} \mathrm{dV}=\mathrm{C}_{\mathrm{V}} \mathrm{dT}+(\partial \mathrm{U} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{dV}$ | From Eq 1, 2, and 4 | 5 |
| $(\partial \mathbf{U} / 2 \mathrm{~V})_{T}=0$ | Property of an ideal gas | 6 |
| ठq $=0$ | For an adiabatic process | 7 |
| - $\mathrm{P}_{\text {op }} \mathrm{dV}=\mathrm{C}_{\mathrm{V}} \mathrm{dT}$ | Substituting Eq 6 and 7 into Eq 5 | 8 |
| $\mathrm{p}_{\text {op }}=\mathrm{p}_{\text {gas }}$ | For a reversible process the opposing pressure must match $p_{\text {gas }}$ at all times | 9 |
| $\mathrm{p}_{\text {gas }} \mathrm{V}=\mathrm{nRT}$ | Equation of state for an ideal gas | 10 |
| -RTdV/V = $\mathrm{C}_{V} \mathrm{dT}$ | Using Eq 9 and 10 in Eq 8 for one mole | 11 |
| $-\mathrm{dV} / \mathrm{V}=\left(\mathrm{C}_{V} / R\right) \mathrm{dT} / \mathrm{T}$ | Rearranging | 12 |
| - $\ln \left(\mathrm{V}_{\mathrm{f}} / \mathrm{V}_{\mathrm{i}}\right)=\left(\mathrm{C}_{V} / \mathrm{R}\right) \mathrm{dT} / \mathrm{T}$ | Since $C_{v}$ is independent of temperature and integrating | 13 |
| $\left(\mathrm{T}_{\mathrm{f}} / \mathrm{T}_{\mathrm{i}}\right)=\left(\mathrm{V}_{\mathrm{i}} / \mathrm{V}_{\mathrm{f}}\right)^{(\mathrm{CV} / R)}$ | Using the definition of In <br> This form relates initial and final T and V | 14 |

|  | There are several ways of rearranging Eq 14 into other forms, by using the ideal gas law <br> and using $\mathrm{C}_{\mathrm{p}}=\mathrm{C}_{\mathrm{V}}+\mathrm{R}$ <br> This relates initial and final p and V | 15 16 |
| :---: | :---: | :---: |
| $\begin{aligned} & T_{f} / T_{i}=\left[p_{f} / p_{i}\right]\left[V_{f} / V_{i}\right] \\ & =\left[p_{f} / p_{i}\right] \bullet\left[p_{f} / p_{i}\right]^{-(C V / C p)} \\ & =\left[\left[p_{f} / p_{i}\right]^{(C p-C V) / / p}\right. \\ & \left.T_{f} / T_{i}=\left[p_{f} / p_{i}\right]\right]^{R / C p} \end{aligned}$ | We find yet another form <br> This relates initial and final $p$ and $T$ <br> These equations apply only to adiabatic reversible processes for an ideal gas | 17 19 |

We will need equation 19 for problems 4 and 6 which involve adiabatic reversible ideal gas, the assumptions we used in these derivations.

## 4.

adiabatic, reversible
1 mole ideal gas $1.0 \mathrm{~atm}, 300 \mathrm{~K} \quad \rightarrow \quad 10.0 \mathrm{~atm}, \mathrm{~T}_{\mathrm{f}}$

| Equation | Basis for the equation | Eq. $\#$ |
| :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{T}_{f} / \mathrm{T}_{\mathrm{i}}=\left[\mathrm{p}_{\mathrm{f}} / \mathrm{p}_{\mathrm{i}}\right]^{\mathrm{R} / \mathrm{Cp}} \\ & \mathrm{~T}_{\mathrm{f}} / 300=[10.0 / 1.0]^{\mathrm{R} / C \mathrm{Cp}} \\ & \mathrm{~T}_{\mathrm{f}} / 300=[10.0 / 1.0]^{2 / 5} \\ & \mathrm{~T}_{\mathrm{f}}=30010^{2 / 5}=754 \mathrm{~K} \end{aligned}$ | use Eq 19 derived above <br> For an ideal monatomic gas, $C_{p}=5 / 2 R$ <br> Solve for $T_{f}$ | 1 |
| $\mathrm{q}=0 \quad$ Answer | adiabatic | 2 |
|  | We choose not to calculate W directly because it is easier to get this value from $\Delta U$ |  |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{T} \mathrm{~d} \mathrm{~V}$ | General, from U = U(T,V) | 3 |
| $\mathrm{d} \mathbf{U}=\mathrm{C}_{V} \mathrm{dT}+(\partial \mathrm{U} / \partial \mathrm{V})_{T} \mathrm{dV}$ | General, using definition of $\mathrm{C}_{V}$ | 4 |
| $(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}}=0$ | Property of an ideal gas | 5 |
| $\begin{aligned} \Delta \mathbf{U} & =\int \mathrm{C}_{\mathrm{V}} \mathrm{dT}=(3 / 2) \mathrm{R}\left[\mathrm{~T}_{\mathrm{f}} \mathrm{~T}_{\mathrm{i}}\right]= \\ & =1.5\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1} 1\right)[754-300] \\ \Delta \mathbf{U} & =5662 \mathrm{~J} \mathrm{~mol}^{-1} \end{aligned} \text { Answer }$ |  | 6 7 |
| $\begin{aligned} & \mathrm{dU}=\delta q+\delta \mathrm{W} \\ & q=0 \\ & \Delta \mathbf{U}=\mathrm{W} \\ & \mathrm{~W}=5662 \mathrm{~J} \mathrm{~mol}^{-1} \end{aligned}$ <br> Answer | First law of thermodynamics For an adiabatic process, as in this problem | $\begin{aligned} & 8 \\ & 9 \\ & 10 \\ & 11 \end{aligned}$ |
| $\mathrm{d} \mathbf{H}=(\partial \mathbf{H} / \partial \mathrm{T})_{\mathrm{p}} \mathbf{d T}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | . $\mathbf{H}=\mathbf{H}(\mathrm{T}, \mathrm{p}$ ) | 12 |
| $\mathrm{dH}=\mathrm{C}_{\mathrm{p}} \mathrm{dT}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | . Using Eq 12 and definition of $\mathrm{C}_{\mathrm{p}}$ | 13 |
| $(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}=0$ | Property of an ideal gas | 14 |

| $\mathrm{C}_{\mathrm{p}}=\mathrm{C}_{V}+\mathrm{R}=(5 / 2) \mathrm{R}$ | Property of an ideal gas which is monatomic | 15 |
| :---: | :---: | :---: |
| $\begin{aligned} & \Delta \mathbf{H}=\int \mathrm{C}_{\mathrm{p}} \mathrm{dT}=(5 / 2) \mathrm{R}\left[\mathrm{~T}_{\mathrm{f}}-\mathrm{T}_{\mathrm{j}}\right] \\ & =(5 / 2)\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right) \text { [754-300] } \\ & =+9437 \mathrm{Jmol}^{-1} \\ & \text { Answer } \end{aligned}$ | Using Eq 13, 14, 15 and integrating | 16 |

| 5. | adiabatic, constant $\mathrm{p}_{\mathrm{op}}=1.0 \mathrm{~atm}$ |
| :--- | :--- |
| 1 mole |  |

This is very similar to Problem 3

| Equation | Basis for the equation | $\begin{aligned} & \text { Eq. } \\ & \text { \# } \end{aligned}$ |
| :---: | :---: | :---: |
| $\delta \mathrm{W}=-\mathrm{pop}_{\text {op }} \mathrm{dV}$ | General definition of work of compressionexpansion | 1 |
| $\mathrm{W}=-\mathrm{pop}_{\text {or }}\left[\mathrm{dV}\right.$ = -1.0 atm $\bullet\left[\mathrm{V}_{\mathrm{r}}-\mathrm{V}_{\mathrm{i}}\right]$ | Given, $\mathrm{p}_{\mathrm{op}}=$ constant $=1.0 \mathrm{~atm}$ Integrating Eq 1 | 2 |
| $\mathrm{pV}=\mathrm{nRT}$ | Ideal gas equation of state | 3 |
| $\mathrm{V}_{\mathrm{f}}=\mathrm{RT}_{\mathrm{f}} / 1.0 \quad \mathrm{~V}_{\mathrm{i}}=\mathrm{R} 300 / 10.0$ | Using given data and Eq 3 | 4 |
| $\mathrm{W}=-1.0 \mathrm{~atm} \bullet\left[\mathrm{RT} \mathrm{f}_{f} / 1.0-\mathrm{R} 300 / 10.0\right]$ | From Eq 2 and 4 | 5 |
| $\mathrm{d} \mathbf{U}=(\partial \mathrm{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{d} \mathrm{V}$ | General, from $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ | 6 |
| $\mathrm{d} \mathbf{U}=\mathrm{C}_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{d} \mathrm{V}$ | General, using definition of $\mathrm{C}_{V}$ | 7 |
| $(\partial \mathbf{U} / \partial \mathrm{V})_{T}=0$ | Property of an ideal gas | 8 |
| $\mathrm{d} \mathbf{U}=\delta \mathrm{q}+\delta \mathrm{W}$ | First law of thermodynamics | 9 |
| $\delta q=0, q=0 \quad$ Answer | For an adiabatic process, as in this problem | 10 |
| $\Delta \mathbf{U}=\mathrm{W}+0$ | From Eq 9 and 10 | 11 |
|  | Case I monatomic ideal gas, $\mathrm{C}_{V}=(3 / 2) \mathrm{R}$ |  |
| $\Delta \mathbf{U}=\int_{C_{V} d T}=\mathrm{C}_{V}\left[T_{f}-\mathrm{T}_{\mathrm{i}}\right]=(3 / 2) R\left[T_{f} 300\right]$ | from Eq 7 and $\mathrm{C}_{\mathrm{v}}$ independent of temperature and $=3 / 2 \mathrm{R}$ for monatomic ideal gas, given $\mathrm{T}_{\mathrm{i}}=300$ | 12 |
| $\begin{aligned} & (3 / 2) R\left[T_{f}-300\right] \\ & \quad=-1.0 \mathrm{~atm} \bullet\left[R T_{f} / 1.0-R 300 / 10.0\right] \end{aligned}$ | From Eq 12 and 11 and 5 | 13 |
| $\mathrm{T}_{\mathrm{f}}=192 \mathrm{~K}$ Answer | Solving Eq 13 for $\mathrm{T}_{\mathrm{f}}$ | 14 |
| W = -1347 J Answer | From substituting Eq 14 into Eq 5 | 15 |
| $\Delta \mathbf{U}=-1347 \mathrm{~J} \quad$ Answer | From Eq 11 and Eq 15 | 16 |
| $\mathrm{d} \mathbf{H}=(\partial \mathbf{H} / \partial \mathrm{T})_{p} \mathrm{dT}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | $. \mathrm{H}=\mathbf{H}(\mathrm{T}, \mathrm{p})$ | 17 |
