## Solutions to Problem Set 6

1. non- ideal gas, $1 \mathrm{~mol} 20.0 \mathrm{~L} 300 \mathrm{~K} \rightarrow 40.0 \mathrm{~L} 300 \mathrm{~K}$ isothermal, reversible

Equation of state: $\quad p=\mathrm{R} T\left[\bar{V}^{-1}+B V^{-2}\right]$

| Equation | Basis for the equation | Eq. \# |
| :---: | :---: | :---: |
| (a)B is a constant independent of T | Given |  |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{T} \mathrm{dV}$ | $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ | 1 |
| dT = 0 | Given, isothermal | 2 |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{dV}$ |  | 3 |
| $(\partial \mathrm{U} / \partial \mathrm{V})_{\mathrm{T}}=\mathrm{T}(\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}-\mathrm{p}$ | Derived from first and second law of thermodynamics and using cross derivatives (see lecture notes Part 4) | 4 |
| $\begin{aligned} & (\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}=\partial\left\{\mathrm{RT}\left[\mathrm{~V}^{-1}+\mathrm{BV}^{-2}\right]\right\} \\ & =\mathrm{R}\left[\mathrm{~V}^{-1}+B \mathrm{~V}^{-2}\right] \\ & \\ & (\partial \mathrm{U} / \partial \mathrm{V})_{\mathrm{T}}=\mathrm{T}(\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}-\mathrm{p} \\ & =\mathrm{T}\left[\mathrm{~V}^{-1}+B \mathrm{~V}^{-2}\right]-\mathrm{RT}\left[\mathrm{~V}^{-1}+\mathrm{BV}^{-2}\right] \\ & =0 \end{aligned}$ | Apply to this equation of state, where $B$ (has units of volume) is indep of $T$ | 5 |
| $\Delta \mathbf{U}=0 \quad$ Answer | From Eq 1, 2 and 5 | 6 |
| $\mathrm{d} \mathbf{H}=(\partial \mathbf{H} / \partial \mathrm{T})_{\mathrm{p}} \mathrm{dT}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | $\mathbf{H}=\mathbf{H}(\mathrm{T}, \mathrm{p})$ |  |
| We could do this: $(\partial \mathrm{H} / \partial \mathrm{p})_{\mathrm{T}}=-\mathrm{T}(\partial \mathrm{~V} / \partial \mathrm{T})_{\mathrm{p}}+\mathrm{V}$ <br> But equation of state is too complex to derive $(\partial \mathrm{V} / \partial \mathrm{T})_{\mathrm{p}}$ Use another route to get $\Delta \mathbf{H}$ | Derived from first and second law of thermodynamics and using cross derivatives (see lecture notes Part 4) |  |
| $\begin{aligned} & \mathbf{H}=\mathbf{U}+\mathrm{pV} \\ & \Delta \mathbf{H}=\Delta \mathbf{U}+\mathrm{p}_{\mathrm{f}} \mathrm{~V}_{\mathrm{f}}-\mathrm{p}_{\mathrm{i}} V_{\mathrm{i}} \end{aligned}$ | Definition | 7 |
| $\begin{aligned} & p=R T / V+B R T / V^{2} \\ & p_{i}=(0.0820578)(300)[(1 / 20.0)+ \\ & \left.\left(B / 20.0^{2}\right)\right] \\ & p_{f}=(0.0820578)(300)[(1 / 40.0)+ \\ & \left.\left(B / 40.0^{2}\right)\right] \\ & \Delta(p V)=(0.0820578)(300) B(-0.025) \end{aligned}$ | Substituting known values | 8 |
| $\begin{gathered} \Delta \mathbf{H}=0+(0.0820578)(300) \mathrm{B} \bullet \\ (-0.025) \\ =\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right)(300) \mathrm{B} \\ \bullet(-0.025) \\ \text { Answer } \end{gathered}$ |  | 9 |
| $\Delta \mathbf{U}=\mathrm{q}+\mathrm{W}$ | First law of thermodynamics | 10 |
| $\mathrm{q}_{\text {REV }}=-\mathrm{W}_{\text {REV }}$ | From Eq 6 and 10 | 11 |

| $\mathrm{W}=-\int \mathrm{p}_{\text {op }} \mathrm{dV}$ | Definition | 12 |
| :---: | :---: | :---: |
| $\mathrm{p}_{\mathrm{op}}=\mathrm{p}_{\text {gas }}$ | reversible | 13 |
| $\begin{aligned} & W_{\text {REV }}=-\int\left[R T / V+B R T / V^{2}\right] d V \\ & =-R T \ln \left(V_{f} / V_{i}\right)+2 B R T\left[\left(1 / V_{f}\right)-\left(1 / V_{i}\right)\right] \end{aligned}$ | Using equation of state for this gas and integrating | 14 |
| $\begin{aligned} & \mathrm{W}_{\text {REV }}=-\mathrm{RT}[\ln (2)+2 \mathrm{~B}(-0.025)] \\ &=-\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right)(300) \bullet \\ & {[\ln (2)-0.050 \mathrm{~B}] } \\ &=-\mathrm{q}_{\text {REV }} \end{aligned}$ | Substituting | 15 |
| $\begin{aligned} & \mathrm{dS}=\delta \mathrm{q}_{\mathrm{REV}} / \mathrm{T} \\ & \Delta \mathrm{~S}=\mathrm{q} \mathrm{REV} / \mathrm{T} \\ & \hline \end{aligned}$ | Second Law of thermodynamics reversible isothermal | $\begin{aligned} & \hline 16 \\ & 17 \end{aligned}$ |
| $\begin{gathered} \Delta \mathbf{S}=+\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right) \bullet \\ {[\ln (2)-0.050 \mathrm{~B}] \quad \text { Answer }} \end{gathered}$ | From Eq 15 and 17 | 18 |
| $\mathbf{A}=\mathbf{U}-\mathrm{TS}$ | Definition | 19 |
| $\Delta \mathbf{A}=\Delta \mathbf{U}-\mathrm{T} \Delta \mathbf{S}$ | For constant T (this problem) | 20 |
| $\begin{gathered} \hline \Delta \mathbf{A}=0-300 \bullet\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right) \bullet \\ {[\ln (2)-0.050 \mathrm{~B}] \quad \text { Answer }} \\ \hline \end{gathered}$ | From Eq 6, 18 and 20 | 21 |
| $\mathbf{G}=\mathbf{H}-\mathrm{TS}$ | Definition | 21 |
| $\Delta \mathbf{G}=\Delta \mathbf{H}-\mathrm{T} \Delta \mathbf{S}$ | For constant T (this problem) | 22 |
| $\begin{gathered} \Delta \mathbf{G}=300 \bullet\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right) \bullet \\ \quad[-0.025 \mathrm{~B}-\ln (2)+0.050 \mathrm{~B}] \\ =300 \bullet\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right) \bullet \\ \\ {[0.025 \mathrm{~B}-\ln (2)] \quad \text { Answer }} \end{gathered}$ | From Eq 9, 18 and 22 | 23 |
| (b) $B$ is dependent on $T$ $\mathrm{B}=\mathrm{a}+\mathrm{bT}+\mathrm{cT}^{2}$ | Given | 24 |
| $\begin{aligned} & (\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}=\partial\left\{\mathrm{RT}\left[\mathrm{~V}^{-1}+\mathrm{BV}^{-2}\right]\right\} \\ & =\mathrm{R}\left[\mathrm{~V}^{-1}+\mathrm{BV}^{-2}\right]+\mathrm{RV}^{-2}(\mathrm{~dB} / \mathrm{dT}) \\ & \\ & \begin{array}{c} (\partial \mathrm{U} / \partial \mathrm{V})_{\mathrm{T}}=\mathrm{T}(\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}-\mathrm{p} \\ =\mathrm{RT}\left[\mathrm{~V}^{-1}+\mathrm{BV}^{-2}\right]-\mathrm{RT}\left[\mathrm{~V}^{-1}+\mathrm{BV}^{-2}\right] \\ +R T V^{-2}(\mathrm{~dB} / \mathrm{dT}) \\ (\partial \mathrm{U} / \partial \mathrm{V})_{\mathrm{T}}= \\ =R T \mathrm{~V}^{-2}(\mathrm{~dB} / \mathrm{dT}) \end{array} \end{aligned}$ | Just as in deriving Eq 5 but with the additional term in (dB/dT) <br> Where $d B / d T=b+2 c T$ | 25 |
| $\begin{aligned} & \Delta \mathbf{U}=\int(\partial \mathbf{U} / \partial \mathrm{V}) \mathrm{T}_{\mathrm{d}} \mathrm{dV} \\ & =\mathrm{RT}(\mathrm{~dB} / \mathrm{dT}) \int \mathrm{V}^{-2} \mathrm{dV} \\ & =\mathrm{RT}(\mathrm{~dB} / \mathrm{dT})\left[\left(1 / \mathrm{V}_{\mathrm{f}}\right)-\left(1 / \mathrm{V}_{\mathrm{i}}\right)\right] \\ & =\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right)(300) \bullet \\ & (\mathrm{b}+600 \mathrm{c}) \bullet[-0.025] \\ & \text { Answer } \end{aligned}$ | From Eq 3 and 25 <br> Note that $\Delta \mathbf{U} \neq 0$ when B is dependent on T | 26 |
| $\begin{aligned} & p=R T / V+B R T / V^{2} \\ & p_{i}=(0.0820578)(300)[(1 / 20.0)+ \\ & \left.\left(B / 20.0^{2}\right)\right] \\ & p_{f}=(0.0820578)(300)[(1 / 40.0)+ \\ & \left.\left(B / 40.0^{2}\right)\right] \\ & \Delta(p V)=(0.0820578)(300) B(-0.025) \end{aligned}$ | The equation for $\Delta(\mathrm{pV})$ is the same as when B is independent of $T$ | 27 |

| $\begin{gathered} \Delta \mathbf{H}=\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right)(300) \bullet \\ (\mathrm{b}+600 \mathrm{c}) \bullet(-0.025) \\ +\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right)(300) \mathrm{B} \\ \bullet(-0.025) \\ \\ =-\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right)(300) \bullet \\ 0.025 \bullet\left[\mathrm{a}+\mathrm{bT}+\mathrm{cT}^{2}+\mathrm{b}+600 \mathrm{c}\right] \\ \text { Answer } \end{gathered}$ | The same as in part (a) except that $\Delta \mathbf{U}$ from Eq 26 and $B=a+b T+c T^{2}$ are inserted. | 28 |
| :---: | :---: | :---: |
| $\begin{gathered} \Delta \mathrm{S}=+\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right) \bullet \\ {[\ln (2)-0.050 \mathrm{~B}] \quad \text { Answer }} \end{gathered}$ | The equation is derived the same as in part (a) except that $B=a+b T+c T^{2}$ is inserted | 29 |
| $\begin{aligned} & \Delta \mathbf{A}=\Delta \mathbf{U}-\mathrm{T} \Delta \mathbf{S} \\ & \Delta \mathbf{A}=(8.31451 \mathrm{~J} \mathrm{~mol} \\ & \quad(\mathrm{b}+600 \mathrm{k}) \bullet(-0.025) \\ & -300 \bullet\left(8.31451 \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}\right) \\ & \quad[\ln (2)-0.050 \mathrm{~B}] \quad \text { Answer } \\ & \hline \end{aligned}$ | The same as in part (a) except that $\Delta \mathbf{U}$ from Eq 26 and $B=a+b T+c T^{2}$ are inserted. | 30 |
| $$ | $\Delta \mathbf{H}$ from Eq 28 and $\mathrm{B}=\mathrm{a}+\mathrm{bT}+\mathrm{cT}^{2}$ are inserted. | 31 |
| (c) $B$ is a constant independent of temperature and the process is carried out irreversibly |  |  |
|  | All are exactly the same as in part (a) because these are state functions and do not depend on the path (reversible or otherwise). <br> What do we know about the non-state functions? <br> Because $\Delta \mathbf{U}=0$ here because of Clausius inequality: $\mathrm{T} \Delta \mathrm{S}>\mathrm{q}_{\text {IRREV }}$ Algebraic relation! Remember W is a signed quantity. Negative value means work is done by system on the surroundings. Less work than maximum work appears in the surroundings for irreversible process |  |

2. non- ideal gas, $2 \mathrm{~mol} 10 \mathrm{~atm} 600 \mathrm{~K} \rightarrow 5 \mathrm{~atm} 300 \mathrm{~K}$ irreversible Equation of state: $\mathrm{pV}=\mathrm{nRT}+\mathrm{nBp} \quad \mathrm{B}=0.035 \mathrm{~L} \mathrm{~mol}^{-1}$

$$
C_{p}=52.675+1.561 \times 10^{-2} T \quad \mathrm{~J} \mathrm{~mol}^{-1} \mathrm{~K}^{-1}
$$

| Equation | Basis for the equation | Eq. |
| :---: | :---: | :---: |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{dV}$ | $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ | 1 |
| $(\partial \mathbf{U} / \partial \mathrm{V})_{T}=\mathrm{T}(\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}-\mathrm{p}$ | Derived from first and second law of thermodynamics and using cross derivatives (see lecture notes Part 4) | 2 |
| $\mathrm{p}=\mathrm{nRT} /(\mathrm{V}-\mathrm{nB})$ | Given equation of state | 3 |
| $\begin{aligned} & (\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}=n R /(\mathrm{V}-\mathrm{nB}) \\ & \begin{aligned} (\partial \mathrm{U} / \partial \mathrm{V})_{\mathrm{T}} & =T(\partial \mathrm{p} / \partial T)_{\mathrm{V}}-\mathrm{p} \\ & =n R T /(V-n B)-n R T /(V-n B) \\ & =0 \end{aligned} \end{aligned}$ | Apply to this equation of state, where $B$ (has units of volume) is independent of $T$ | 4 |
| $\mathrm{d} \mathbf{U}=\mathrm{C}_{\mathrm{v}} \mathrm{T}$ + 0 | From Eq 1 and 4 | 5 |
| $C_{p}-C_{V}=\left[\mathrm{p}+(\partial U / \partial)_{T}\right](\partial V / \partial T)_{p}$ | General relation derived from $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ and the first law of thermodynamics (see lecture notes Part 2) | 6 |
| $\begin{aligned} & \text { V-nB }=n R T / p \\ & (\partial V / \partial T)_{p}=n R / p \end{aligned}$ | Rearrange equation of state and differentiate | 7 |
| $\mathrm{C}_{\mathrm{p}}-\mathrm{C}_{V}=[\mathrm{p}+0](\mathrm{nR} / \mathrm{p})=\mathrm{nR}$ | From Eq 6, 7 and 4 | 8 |
|  | From Eq 8 and given $\mathrm{C}_{\mathrm{p}}$ | 9 |
| $\begin{array}{\|l\|} \hline \Delta \mathbf{U}=2 \mathrm{~mol} \bullet \\ \int\left(44.361+1.561 \times 10^{-2} \mathrm{~T}\right) \mathrm{dT} \\ \hline \end{array}$ | Integrating Eq 5 and using given $\mathrm{C}_{V}$ | 10 |
| $\begin{aligned} & \Delta \mathbf{U}= 2\left\{44.361\left(\mathrm{~T}_{2}-\mathrm{T}_{1}\right)\right. \\ &\left.\quad+(1 / 2) .51 \times 10^{-2}\left(\mathrm{~T}_{2}{ }^{2}-\mathrm{T}_{1}{ }^{2}\right)\right\} \\ &= 2\{(44.361(300-600) \\ &\left.\quad+(1 / 2) 1.561 \times 10^{-2}\left(300^{2}-600^{2}\right)\right\} \\ &= 2\{-13308.3-2107.3\} \\ &=-30830 \mathrm{~J} \end{aligned}$ | Integrating Eq 5 and using given $\mathrm{C}_{V}$ | 11 |
| $\mathrm{d} \mathbf{H}=(\partial \mathbf{H} / \partial \mathrm{T})_{\mathrm{p}} \mathrm{dT}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | $\mathbf{H}=\mathbf{H}(\mathrm{T}, \mathrm{p})$ | 12 |
| $(\partial \mathrm{H} / \partial \mathrm{p})_{\mathrm{T}}=-\mathrm{T}(\partial \mathrm{V} / \partial \mathrm{T})_{\mathrm{p}}+\mathrm{V}$ | Derived from first and second law of thermodynamics and using cross derivatives (see lecture notes Part 4) | 13 |
| $(\partial \mathrm{V} / \partial \mathrm{T})_{\mathrm{p}}=\mathrm{nR} / \mathrm{p}$ and $\mathrm{V}=\mathrm{nRT} / \mathrm{p}+\mathrm{nB}$ <br> $(\partial \mathbf{H} / \partial \mathrm{p})_{\mathrm{T}}=\mathrm{nB}$ | From Eq 7 and Equation of state substituted into Eq 13 | 14 |
| $\begin{aligned} & \mathrm{dH}=\mathrm{C}_{\mathrm{p}} \mathrm{dT}+\mathrm{nB} \mathrm{dp} \\ & \Delta \mathbf{H}= \mathrm{ln}\left(52.675+1.561 \times 10^{-2} \mathrm{~T}\right) \mathrm{d} T \\ &+\int \mathrm{nBdp} \end{aligned}$ | From Eq 12 and 14 | 15 |

| $\begin{array}{\|l} \Delta \mathrm{H}=2\left\{52.675\left(\mathrm{~T}_{2}-\mathrm{T}_{1}\right)\right. \\ \left.\quad+(1 / 2) 1.561 \times 10^{-2}\left(\mathrm{~T}_{2}{ }^{2}-\mathrm{T}_{1}{ }^{2}\right)\right\} \\ \quad+2 \cdot 0.035 \mathrm{~L} \mathrm{~mol}^{-1}\left[\mathrm{p}_{2}-\mathrm{p}_{1}\right] \\ =2\{(52.675(300-600) \\ \left.\quad+(1 / 2) 1.561 \times 10^{-2}\left(300^{2}-600^{2}\right)\right\} \\ +2 \bullet 0.035[5-10] \\ \bullet 8.31451 / 0.0820578 \\ =2\{-15802.5-2107.3-17.7\} \\ =-35850 \mathrm{~J} \quad \text { Answer } \end{array}$ | Integrating and substituting known values <br> We would have obtained the same answer by using $\mathrm{H}=\mathrm{U}+\mathrm{pV}$ <br> $\Delta \mathbf{H}=\Delta \mathbf{U}+\Delta(\mathrm{pV})$ It happens that $\mathrm{dV}=0$ here | 8 |
| :---: | :---: | :---: |
| $\mathrm{dS}=(\partial \mathbf{S} / \partial \mathrm{T})_{\mathrm{p}} \mathrm{dT}+(\partial \mathbf{S} / \partial \mathrm{p})_{\mathrm{T}} \mathrm{dp}$ | $\mathbf{S}=\mathbf{S}(\mathrm{T}, \mathrm{p})$ | 12 |
| $(\partial S / \partial p)_{T}=-(\partial \mathrm{V} / \partial T)_{p}$ | Derived (see lecture notes Part 4) starting from $\mathrm{d} \boldsymbol{U}=\mathrm{dq}_{\mathrm{rev}}-\mathrm{p} \mathrm{d} V=T \mathrm{~d} \boldsymbol{S}-\mathrm{p} \mathrm{d} V$ and use of cross derivatives | 13 |
| $\mathrm{dS}=\left(\mathrm{C}_{\mathrm{p}} / \mathrm{T}\right) \mathrm{dT}-\mathrm{nRdp} / \mathrm{p}$ | Using Eq 7 and 2 into Eq 12 | 14 |
| $\begin{gathered} \Delta \mathrm{S}=\mathrm{\int n}\left(52.675 / \mathrm{T}+1.561 \times 10^{-2}\right) \mathrm{dT} \\ -\mathrm{nR} \int \mathrm{dp} / \mathrm{p} \\ \hline \end{gathered}$ | Using Eq 7 and 2 into Eq 12 | 15 |
| $\begin{aligned} & \Delta \mathbf{S}=2\{ \\ & 52.675 \ln \left(\mathrm{~T}_{2} / \mathrm{T}_{1}\right)+1.561 \times 10^{-2}\left(\mathrm{~T}_{2}-\mathrm{T}_{1}\right) \\ &\left.-8.31451 \ln \left(\mathrm{p}_{2} / \mathrm{p}_{1}\right)\right\} \\ & \Delta \mathbf{S}= 2\{52.675 \ln (300 / 600) \\ &+1.561 \times 10^{-2}(300-600) \\ &\quad-8.31451 \ln (5 / 10)\} \\ & \Delta \mathbf{S}=-52.12 \mathrm{JK}^{-1} \quad \text { Answer } \end{aligned}$ | Integrating and substituting given values <br> We would have obtained the same answer by using $\mathrm{d} \mathbf{S}=(\partial \mathbf{S} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{S} / \partial \mathrm{V})_{\mathrm{T}} \mathrm{d} \mathrm{V}$ $(\partial \mathbf{S} / \partial \mathrm{V})_{\mathrm{T}}=(\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}$ but it happens that $\mathrm{dV}=0$ here, so $\Delta \mathbf{S}=\mathrm{C}_{\mathrm{V}} \mathrm{dT} / \mathrm{T}=$ same answer | 16 |
| $\begin{aligned} & \mathbf{A}=\mathbf{U}-\mathbf{T S} \\ & \Delta \mathbf{A}=\Delta \mathbf{U}-\Delta(\mathrm{TS}) \\ & \mathbf{S}_{\text {abs, }}=\mathbf{S}_{\text {abs }, i}+\Delta \mathbf{S} \\ & \Delta(\mathbf{T S} \mathbf{S})=300 \mathbf{S}_{\text {abs }, i}-600\left[\mathbf{S}_{\text {abs }, i}+\Delta \mathbf{S}\right] \\ & \Delta \mathbf{A}=-30830 \mathrm{j} \\ & \\ & \\ & -300 \mathbf{S}_{\text {abs }, i}-600\left[\mathbf{S}_{\text {abs }, i}-52.12\right] \end{aligned}$ | Definition <br> We already have $\Delta \mathbf{U}$. Since dT is not zero for this problem, it requires that we know absolute entropy. We have to have either the absolute entropy for the gas at the initial state or at the final state in order to calculate $\Delta \mathbf{A}$. If we are given data to calculate $\mathbf{S}_{\mathrm{abs}, i}$, then we can do it. |  |
| $\begin{aligned} & \mathbf{G}=\mathbf{H}-\mathbf{T S} \\ & \Delta \mathbf{G}=\Delta \mathbf{H}-\Delta(\mathrm{TS}) \\ & \mathbf{S}_{\text {abs }, \mathrm{f}}=\mathbf{S}_{\text {abs }, i}+\Delta \mathbf{S} \\ & \Delta(\mathrm{TS})=30 \mathbf{S}_{\text {abs }, i}-600\left[\mathbf{S}_{\mathrm{abs}, i}+\Delta \mathbf{S}\right] \\ & \Delta \mathbf{G}=-35850 \mathrm{~J} \\ & \quad-300 \mathbf{S}_{\text {abs }, i}-600\left[\mathbf{S}_{\text {abs }, i}-52.12\right] \end{aligned}$ | Definition <br> We already have $\Delta \boldsymbol{H}$. <br> As from above argument, we have to use the absolute entropy for the gas at the initial state and at the final state in order to calculate $\Delta \mathbf{G}$ |  |

3. non- ideal gas, $2 \mathrm{~mol} \mathrm{p}_{i}=1 \mathrm{~atm} \mathrm{~T}_{i}=300 \mathrm{~K} \rightarrow \mathrm{p}_{f}=11$ atm $\mathrm{T}_{f}=300 \mathrm{~K}$ $\mathrm{V}_{i}=\mathrm{a}+\mathrm{RT}_{i} / \mathrm{p}_{i}$
$\mathrm{V}_{f}=\mathrm{a}+\mathrm{RT}_{f} / \mathrm{p}_{f}$
Equation of state: $p V=R T+a p \quad a=a(T)$

| Equation | Basis for the equation | Eq. \# |
| :---: | :---: | :---: |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{T} \mathrm{dV}$ | $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ | 1 |
| $(\partial \mathrm{U} / \partial \mathrm{V})_{\mathrm{T}}=\mathrm{T}(\partial \mathrm{p} / \partial \mathrm{T})_{\mathrm{V}}-\mathrm{p}$ | Derived from first and second law of thermodynamics and using cross derivatives (see lecture notes Part 4) | 2 |
| $\begin{aligned} & \mathrm{pV}=R T+a p \\ & p=R T /(V-a), a=a(T) \end{aligned}$ | Given equation of state | 3 |
| Q.E.D. | Apply to this equation of state <br> Using Eq 2 | 4 5 |
| $\mathrm{d} \mathbf{H}=(\partial \mathbf{H} / \partial \mathrm{T})_{\mathrm{p}} \mathrm{d} T+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | $\mathbf{H}=\mathbf{H}(\mathrm{T}, \mathrm{p})$ | 6 |
| $(\partial \mathrm{H} / \partial \mathrm{p})_{\mathrm{T}}=-\mathrm{T}(\partial \mathrm{V} / \partial \mathrm{T})_{\mathrm{p}}+\mathrm{V}$ | Derived from first and second law of thermodynamics and using cross derivatives (see lecture notes Part 4) | 7 |
| $\begin{aligned} & \mathrm{V}=\mathrm{RT} / \mathrm{p}+\mathrm{a} \\ & (\partial \mathrm{~V} / \partial \mathrm{T})_{p}=\mathrm{R} / \mathrm{p}+\mathrm{da} / \mathrm{dT} \end{aligned}$ | From Equation of state (Eq 3) | 8 |
| $\begin{aligned} &(\partial \mathbf{H} / \partial \mathrm{p})_{T}=-\mathrm{T}(\partial \mathrm{~V} / \partial \mathrm{T})_{\mathrm{p}}+\mathrm{V} \\ &=-\mathrm{RT} / \mathrm{p}-\mathrm{T}(\mathrm{da} / \mathrm{dT})+\mathrm{RT} / \mathrm{p}+\mathrm{a} \\ &(\partial \mathbf{H} / \partial \mathrm{p})_{T}=\mathrm{a}-\mathrm{T}(\mathrm{da} / \mathrm{dT}) \quad \text { Q.E.D. } \end{aligned}$ | Substituting Eq 8 into Eq 7 | 9 |
| $\begin{aligned} & a=0.02+0.005 \times 10^{-2}(\mathrm{~T}-300) \\ & (\mathrm{da} / \mathrm{dT})=0.005 \times 10^{-2} \quad \mathrm{~L} \mathrm{~mol}^{-1} \\ & \mathrm{~mol}^{-1} \mathrm{~K}^{-1} \end{aligned}$ | We will need da/dT in Eq 5 and Eq 9 The given 3 values of $a(T)$ changes linearly with $T$ by 0.005 per 100 K increment | 10 |
| $\mathrm{d} \mathbf{U}=(\partial \mathbf{U} / \partial \mathrm{T})_{\mathrm{V}} \mathrm{dT}+(\partial \mathbf{U} / \partial \mathrm{V})_{T} \mathrm{dV}$ | $\mathbf{U}=\mathbf{U}(\mathrm{T}, \mathrm{V})$ | 1 |
| $\mathrm{dU}=\mathrm{C}_{\mathrm{V}} \mathrm{dT}+\mathrm{RT}^{2}(\mathrm{da} / \mathrm{dT}) /(\mathrm{V}-\mathrm{a})^{2} \mathrm{dV}$ <br> In this problem dT = 0 | Substituting Eq 5 into Eq 1 | 11 |
|  | Integrating Eq 11 <br> Using equation of state to express $(\mathrm{V}-\mathrm{a})^{-1}$ <br> substituting values <br> Using conversion factor $8.31451 \mathrm{~J} / 0.0820578 \mathrm{~L}$ atm | 12 13 14 |
| $\mathrm{d} \mathbf{H}=(\partial \mathbf{H} / \partial \mathrm{T})_{\mathrm{p}} \mathrm{dT}+(\partial \mathbf{H} / \partial \mathrm{p})_{T} \mathrm{dp}$ | $\mathbf{H}=\mathbf{H}(\mathrm{T}, \mathrm{p})$ | 6 |
| $\mathrm{dH}=0+\{\mathrm{a}-\mathrm{T}(\mathrm{da} / \mathrm{dT})\} \mathrm{dp}$ | Using dT = 0 and Eq 9 into Eq 6 | 15 |

|  | Integrating Eq 15 <br> Substituting values | 16 |
| :---: | :---: | :---: |

| :---: | :---: | :---: |
| $\begin{aligned} & \mathrm{F}=\mathrm{mg} \\ & \mathrm{~F}_{\mathrm{z}+\mathrm{dz}}+\mathrm{dF}=\mathrm{F}_{\mathrm{z}} \end{aligned}$ | See lecture notes Part 1 for starting this problem Pressure at any height $z$ is determined by the column of fluid above that height. Start withforce arising from the weight of fluid in the column at $z\left(F_{z}\right)$ and compare that with the force arising from the weight of the fluid in the column at $z+d z$. | $\begin{array}{\|l\|} \hline 1 \\ 2 \end{array}$ |
| Let $\rho$ be the density at height $z$ The mass of fluid in the column between $z$ and $z+d z$ is $\rho A d z$ $d F=(\rho A d z) g$ | $A$ is the cross sectional area of the column | 3 |
| $\begin{aligned} & \text { The pressure: } \\ & p \text { at height } z=F_{z} / A \\ & p+d p \text { at height } z+d z=F_{z+d z} / A \\ & A(p+d p)+d F=A p \\ & d F=-A d p \end{aligned}$ | Substituting Eq $4 \& 5$ into Eq 2 Rearranging | $\begin{array}{\|l} 4 \\ 5 \\ 6 \\ \hline \end{array}$ |
| $\mathrm{dp}=-\mathrm{\rho gdz}$ | Substituting Eq 6 into Eq 3 | 7 |
| $\rho=\mathrm{M} / \mathrm{V}$ | where M is the molar mass and V is the molar volume |  |
| $\mathrm{dp}=-(\mathrm{M} / \mathrm{V}) \mathrm{gdz}$ | substituting for $\rho$ in Eq 7 | 8 |
| $d p / p=-(M / Z R T) ~ g d z$ | Using $Z=p V / R T$ or $V=Z R T / p$ into Eq 8 | 9 |
| $\begin{aligned} & \int_{\mathrm{po}}{ }^{p}(\mathrm{dp} / \mathrm{p})=-(\mathrm{M} / \mathrm{ZRT}) \mathrm{g} \int_{0}^{z} \mathrm{dz} \\ & \ln \left(\mathrm{p} / \mathrm{p}_{0}\right)=-(\mathrm{Mg} / \mathrm{ZRT}) \mathrm{z} \\ & \mathrm{p}=\mathrm{p}_{0} \exp [-(\mathrm{Mg} / \mathrm{ZRT}) \mathrm{z}] \end{aligned}$ | Integrating between z = 0 and $z$ | 10 11 |
| (a) if $Z>1$, <br> $\exp [-(M g / Z R T) z]>\exp [-(M g / R T) z]$ <br> That is, need to go to larger height to drop from $p_{0}$ (at the surface) to the same pressure $p$ it would have been had the gas been ideal. <br> This means the gas distribution is broader when $Z>1$. <br> (b) if $Z<1$, <br> $\exp [-(\mathrm{Mg} / \mathrm{ZRT}) \mathrm{z}]<\exp [-(\mathrm{Mg} / \mathrm{RT}) \mathrm{z}]$ <br> That is, don't need to go as high to drop from $p_{0}$ to the same pressure $p$ it would have been had the gas been ideal. <br> This means the gas distribution is narrower Z < 1 . | Comparing with ideal case where $\mathrm{Z}=1$ |  |
| $\begin{aligned} & \text { If } Z=1+B p \\ & d p / p=-[M /(1+B p) R T] g d z \end{aligned}$ | Substitute this into Eq 9 | 12 |
| \{(1+Bp)/p\} dp = - [Mg/RT] dz | Rearranging |  |

| $\int_{p 0}{ }^{p}(d p / p)+B \int_{p 0}{ }^{p} d p$ |  |  |
| ---: | :--- | :--- |
| $=-(M g / R T) \int_{0}{ }^{z} d z$ | Integrating between $z=0$ and $z$ |  |
| $\ln \left(p / p_{0}\right)+B\left(p-p_{0}\right)$ <br> $=-(M g / R T) z$ <br> Answer | to be compared with the ideal case: <br> $\ln \left(p / p_{0}\right)=-(M g / R T) z$ |  |

8. Fugacity of a gas

| Equation | Basis for the equation | Eq. <br> $\#$ |
| :--- | :--- | :--- |
| $Z=1+[b-(a / R T)](p / R T)$ <br> $(Z-1) / p=[b-(a / R T)] / R T$ | Given <br> Rearranging | 1 |
| $\ln (f / p)=\int_{0}^{p}[(Z-1) / p]_{T} d p$ | which we derived in class (see lecture notes Part 5) | 3 |
| $\left.\ln (f / p)=\int_{0}^{p}\{b-(a / R T)] / R T\right\}_{T} d p$ <br> $=[b-(a / R T)] / R T\}_{T} p$ | Substituting Eq 2 into Eq 3 <br> Integrating |  |
| $(f / p)=\exp [(p / R T)[b-(a / R T)]$ <br> $f=p \exp [(p / R T)[b-(a / R T)]$ <br> Answer |  |  |

## 9.

| Equation | Basis for the equation | Eq. <br> $\#$ |
| :---: | :---: | :---: |
| The actual chemical potential is $\mu(\mathrm{T}, \mathrm{p})=\mu^{\ominus}(\mathrm{T})+\mathrm{RT} \ln (f / 1$ bar $)$ | Recall that the standard state for a gas corresponds to a fictitious state of an ideal gas at 1 bar and temperature T for which the chemical potential is $\mu^{\ominus}(\mathrm{T})$ | 1 |
| $\frac{\mu(T, p)}{T}=\frac{\mu^{\ominus}(T)}{T}+R \ln (f / 1 \mathrm{bar})$ | Dividing Eq 1 by T | 2 |
| $(1 / n) \frac{\mathbf{G}}{T}=(1 / n) \frac{\mathbf{G}^{\ominus}}{T}+\operatorname{Rln}(f / 1 \mathrm{bar})$ | Recall that for a substance $\mu=\mathbf{G} / \mathrm{n}$ where n is the number of moles | 3 |
| $\begin{aligned} &(1 / \mathrm{n})[\partial / \partial \mathrm{T}(\mathbf{G} / \mathrm{T})]_{\mathrm{p}}= \\ &(1 / \mathrm{n})\left[\partial / \partial \mathrm{T}\left(\mathbf{G}^{\ominus} / \mathrm{T}\right)\right]_{\mathrm{p}} \\ &+\mathrm{R} \partial \mathrm{ln}(f / 1 \mathrm{bar}) / \partial \mathrm{T}]_{\mathrm{p}} \end{aligned}$ | Take the derivative of both sides with respect to $T$ at constant p | 4 |
| $[\partial / \partial \mathrm{T}(\mathbf{G} / \mathrm{T})]_{p}=-\mathbf{H} / \mathrm{T}^{2}$ | The Gibbs-Helmholtz equation (see lecture notes Part 5) | 5 |
| $\left.-\mathbf{H} / \mathrm{T}^{2}=-\mathbf{H}^{\ominus} / \mathrm{T}^{2}+\mathrm{R} \partial \ln (f / 1 \mathrm{bar}) / \partial \mathrm{T}\right]_{\mathrm{p}}$ | Substitute Eq 5 into Eq 4, where $\mathbf{H}$ and $\mathbf{H}^{\ominus}$ are now molar quantities | 6 |
| $\left.\mathbf{H}=\mathbf{H}^{\ominus}-\mathrm{R} \mathrm{~T}^{2} \partial \ln (f / 1 \mathrm{bar}) / \partial \mathrm{T}\right]_{\mathrm{p}}$ <br> Q.E.D. | $\mathbf{H}^{\ominus}$ is $\mathbf{H}_{\text {ideal }}{ }^{\ominus}$ since the standard state at temperature T corresponds to a fictitious gas behaving ideally at 1 bar, whereas $\mathbf{H}$ is the molar enthalpy of the real gas. | 7 |
